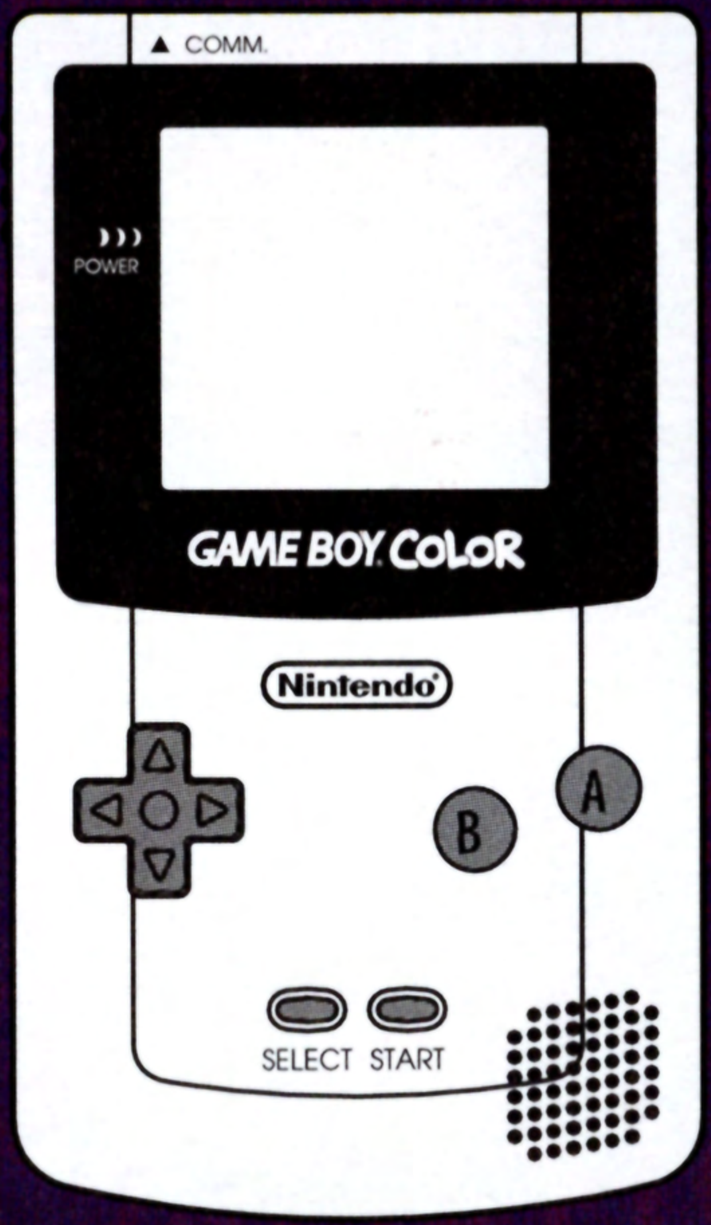
START UP



INTO THE PALACE

After you've inserted the Caesars Palace II cartridge, and turned on the power, you'll be presented with a set of logos. You can skip through these by pressing any button, or you can watch them all the way through. The first screen you come to after those will be the Title Screen, which gives you these options:

Start
Options

Start: Pressing A on the Start option will take you to Caesars Palace Reception, where you can enter the casino, load players from a saved players game, save your players for later, edit players, and view the statistics of your players. To read more about these options, see below.

Options: Press Options to set up the configuration of your Caesars Palace II game. This will allow you to set volume for sound effects and music, and ambient volume. At any time, you can hit B to return to a previous screen.

RECEPTION

In Reception, you have the following choices:

Enter Casino: Once you've created and modified your players, hit A on this option to enter the Lobby of the casino and choose your games!

LOAD PLAYER

This option allows you to call back players from previous saved games to play again. In this screen, simply highlight the saved player you wish to use game you'd like to use and press A.

SAVE PLAYER

Here you can save the current player's game (which includes the players, statistics and bank balance), to come back and play another day! Highlight either an empty slot or an old player and press A to save your player.

Edit Name: If you want to play, you'll need a name. Player1 is the default name, but you can change that. Just choose the "Edit Players" option and you'll be taken to a screen that shows a list of letters. Highlight your player, click A, and use the control pad to move to Clear.

Hit A to clear the player's name and then use the control pad and the A key to select a new name (of up to 8 characters). Once you're done, choose OK and move back to Reception using the B button.

View Statistics: Clicking on "View Statistics" allows you to see the ability and luck of your player. Highlight the player you want to see statistics for, click A, and then move up or down to select which game statistics you'd like to view. To view another player's statistics, hit B then select the next player load that player (in Load Player and then return to View Statistics). When you're done, just hit the B button to return to Reception.

THE LOBBY

Once you're in the Lobby, you can wander around and take a look at the casino, in the middle of the floor is the Cashier, heading to the Cashier will allow you to take out loans or repay them. Once at the cashier, choose Borrow or Repay, and use the control pad to choose the amount you're interested in, then press A. It's that easy. You can only borrow money from the Cashier if you have less than $100. The Cashier will loan you up to $2,000 at a time, up to a maximum of $10,000.

Scattered around the floor are machines and gaming tables, just walk up to a table to play that game.

Progression through the table limits: When you first enter the game you are given $2,000 and are only able to play on the lower limit tables of $1-100 and $10-1,000. Once you have returned to the Lobby with over $10,000 dollars, then you are invited to move up to the $25-2,500 table limit.

Once you have completed and returned to the Lobby with over $100,000, you are then invited to play on the $100-10,000. If you are lucky enough to gamble your way past

$1,000,000, you will be invited to play on the highest table limit of $250-25,000.

These higher limit tables are on different levels of the casino floor - the bouncers will not let you through until you have been invited to play on the tables.

The Games

In any of the games, you quit back out to the Lobby just by hitting Select. This will also give you all the options you have in the context of the game.

Blackjack: This is the classic game of 21. See the appropriate section for details on how to play.

Mini Baccarat: The game of high rollers, all the rage in European casinos. See the appropriate section for details on how to play.

Roulette: This is a game of chance, in which you bet where the ball is going drop into the wheel. See the appropriate section for details on how to play.

Poker Challenge: A selection of games based on the classic poker game. See the appropriate section for details on how to play.

Video Poker: A selection of other poker games, played on video screens. See the appropriate section for details on how to play.

Slot Machines: A wide variety of the standard one-armed bandit. See the appropriate section for details on how to play.

Video Keno: Two versions of the game of lucky numbers, played on video screens. See the appropriate section for details on how to play.

Big 6: Otherwise known as Wheel Of Fortune™. See the appropriate section for details on how to play.

Chip Tip: *Remember that no matter what game you play, hitting Select will give you a list of your options. If you're ever unsure of what you're doing, hit Select!*

The Games

BLACKJACK

Blackjack is a game players play against the "house", or the casino. The object of the game is to get cards that add up to a number as close to 21 as possible.
If the player goes over 21, he busts and is out of the hand. All cards are worth the numbers printed on them. Face cards are worth 10, and the ace is worth either 1 or 11, player's choice.

The game goes like this: Each player is dealt a single card, face up. Then the dealer gets a card face down, the player then gets a second card. You're going to try to make sure your total is higher than the dealer's without busting. If your hand is higher than the house's hand, you win. If it's a tie, you "push". If it is lower, you lose. If either you or the house draw 21 with the first two cards, it's called Blackjack. If you draw it, you win. If the dealer draws it, everyone loses. If both the dealer and you draw Blackjack, you tie.

There are four buttons across the bottom of the screen. They are:

Speed Bet: This option automatically selects the amount of the last bet you made and readies you for the deal.

Change Bet Unit: You can change your bet at the beginning of any hand. Use the control pad to determine how high a wager you'd like to make. To add to the bet unit, move onto the chip and click A, to decrease the bet unit move onto chip and click B. Then move down to OK, and hit A. This is your new bet unit, and you'll be using this bet unit as your basic bet until you change it.

Deal: Choosing this option starts the game.

After the player has placed their bet, the dealer deals out the cards. This is where the game gets interesting.

You can choose to Hit, which means you want another card. You can continue to Hit until you reach 21 or go bust.

You can choose to Stand, which means you're happy with your cards.

You can Double your bet, which means you are doubling your bet and will be dealt one more card only.

On certain occasions, when your cards are identical (two 8s, for example), you can Split. This requires another bet unit on the table, and it allows you to play each card as a brand-new hand. (All picture cards are counted as a ten, so any combination of these can be split).

To view your current statistics.

On occasion, the dealer will show an ace as the facing card. Then the dealer will ask you if you want Insurance. This means that you lay down half your bet on the chance the house has Blackjack. If you're right, you get your money back. If you're wrong, you lose that insurance money and continue to play as normal.

There is a facility in the options menu to view hints for playing Blackjack. Just hit SELECT and move down to Game Hints.

GOOD LUCK!

The SELECT screen:

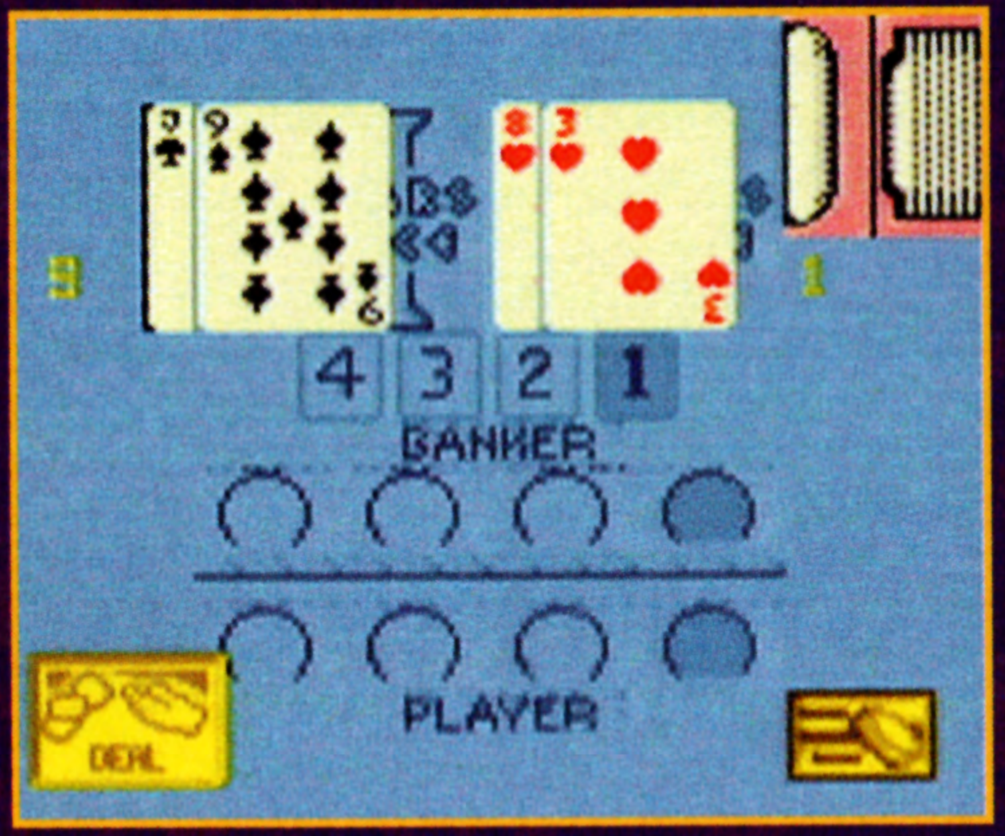
Quit to Lobby: Exits you from Blackjack
Game Hints: Provides hints on playing Blackjack
Game Options: This screen allows you to do many things, among them are:

Number of decks in shoe: The lower the amount of decks in the shoes, the easier it is to count.

Return to game: Just like the name says. This option will drop you back in the thick of the action.

Chip Tip: *It's usually a bad idea to hit on 16!*

MINI BACCARAT



Baccarat is a very popular game in European casinos. It's a game for high rollers and those who aren't afraid to take a chance, and it holds great rewards for those who're daring enough to make a wager. Following are the basics of the game.

The player can bet on the Player's hand to be the highest, or they can bet on the Bank's. They can also bet that the two hands will Tie, though that's a long shot - approximately 14% of these bets win. Once you have made a bet, both hands are dealt. If one of them totals 8 or 9, the person holding that hand wins. If either hand exceeds 9, the tens digit is ignored. That is, if the cards a Player is holding equal 12, you just drop the 1 and make it a 2.

If a Player's total is less than 6, he has to draw an extra card to add to his total. If the Bank's total is less than 7, and the player drew a card, the bank may have to draw an extra card too, depending on what was drawn. Three cards are the maximum drawn. All card drawing is automatic. The bank has a slightly greater chance of winning because of the rules of the game, so when you bet on the Bank, you have to pay a 5% commission to make it up to them.

To play the game, simply choose your bet amount by clicking on the Change Bet Unit icon. After you've chosen your bet, return to the board, position the cursor on which position you'd like to bet on, and make your bet. When you're ready to go, hit the Deal icon and cross your fingers.

Speed Bet: This option automatically selects the amount of the last bet you made and readies you for the deal.

Change Bet Unit: You can change your bet at the beginning of any hand. Use the control pad to determine how high a wager you'd like to make. To add to the bet unit, move onto the chip and press A, to decrease the bet unit move onto chip and press B. Then move down to OK, and press A. This is your new bet unit, and you'll be using this bet unit as your basic bet until you change it.

Show Rule Cards: Turns Rule Cards on and off. If they are on, you see why you were forced to take another card, why you've won or why you've lost.

Return to game: Just like the name says. This option will drop you back in the thick of the action.

Chip Tip: *It's not a good idea to bet on the Tie!*

ROULETTE

Roulette is a game that's fairly easy to master. All that's really necessary to know about it is that you bet on the number you believe that ball will drop into in the wheel. You can bet on the color the ball will land on, (red or black; if the ball lands on green, the house wins), the exact number it goes to, a pair of numbers next to each other, or an adjacent group of numbers. Whether the number is odd or even. Players can bet on a column of 3 numbers by placing their bets on the righthand line, or on any of 3 rows of 12 numbers by placing their bets in one of bottom row boxes. Players can also bet the number spun will be 1-12, 13-24, or 25-36, or even from 1-18 or 19-36. All that it takes to make a bet is to place a token on the selected area of the betting table.

All the numbers have a color, as you may have noticed. 18 are red, 18 are black, and 2 are green. The two green numbers are 0 and 00; they are automatic house wins, and if they come up, you can win only if you have bet on one of those two numbers.

To play the game, just choose your bet amount with the Change Bet Unit icon and place your bets wherever you like on the board. A colored chip will represent your bet. Once you place a chip on the table you cannot change your bet unit until the next turn. As always, you move with the directional keys and choose your target with the A, reduce your bet with B. When you're ready to go, click on the Spin Wheel icon, and watch the ball spin. If you're lucky, you'll collect a large bundle.

Spin Wheel: Choosing this option ends your turn and moves on to the next player's turn.

Change Bet Unit: You can change your bet at the beginning of any hand. Use the control pad to determine how high a wager you'd like to make. To add to the bet unit, move onto the chip and press A, to decrease the bet unit move onto chip and press B. Then move down to OK, and press A. This is your new bet unit, and you'll be using this bet unit as your basic bet until you change it.

POKER CHALLENGE

All Poker Challenge machines have the same payout:

Hand	1-4 coins	5 coins
Straight Flush	5 to 1	10 to 1
Royal Flush	50 to 1	100 to 1
Bad Beat	500 to 1	1000 to 1

You can play 1 to 5 coins on any of the Poker Challenge machines. You win by beating all of the other hands. A win

pays 1 to 1. If you are tied for the best hand, you will get your bet back.

A "Bad Beat" hand is when you have 4 of a Kind or better, and lose to a higher 4 of a Kind or better hand. Note that in the Hold 'Em Challenge games, if the winners are sharing the same 4 of a Kind, the "Bad Beat" jackpot is not awarded.

There are four games you can play in the Poker Challenge: Double Hold 'Em Challenge, Hold 'Em Challenge, Double Stud Challenge, and Stud Challenge. These are simple games, but they're also very entertaining.

Hold 'Em Challenges

The Hold 'Em Challenges are essentially the same. In Double Hold 'Em, though, you have the ability to double your bet once you've seen the first few cards that are dealt. Also, you play against three other hands, where in Hold 'Em, you play against only two others.

Each Hold 'Em Challenge deals several sets of cards. You choose which one you want to play with.

The machine deals out a hand in the middle, and you combine the cards you've chosen with the cards in the center of the table - as does everyone else. The best poker hand wins.

To play, simply use the control pad to move the cursor over the coin slot, deposit as many coins as you wish to have on credit, and begin play.

The Stud Challenges

Like the Hold 'Em Challenges, the Stud Challenges are essentially the same, though again the Double Stud Challenge has the option to bet a greater sum on the outcome once the first few cards have been revealed.

You are dealt seven cards in this game, and you use the best five to create a winning hand. In Double Stud Challenge, you see only the first five before you're asked if you want to double your bet. Once you've made your choice, the remaining cards are revealed and you discover if you've been lucky.

The SELECT screen:

These are the rankings of winning poker hands:

Royal Flush (the highest-ranking cards of a suit; that is, A, K, Q, J, and 10, all of the same suit)

Straight Flush (similar to a Royal Flush, only the cards can be any in a sequence)

Four of a Kind

Full House (Three of a kind combined with a pair)

Flush (all cards of the same suit, not in any particular order)

Straight (cards that go in a sequence; for example, 6, 7, 8, 9, 10)

Three of a Kind

Two Pair

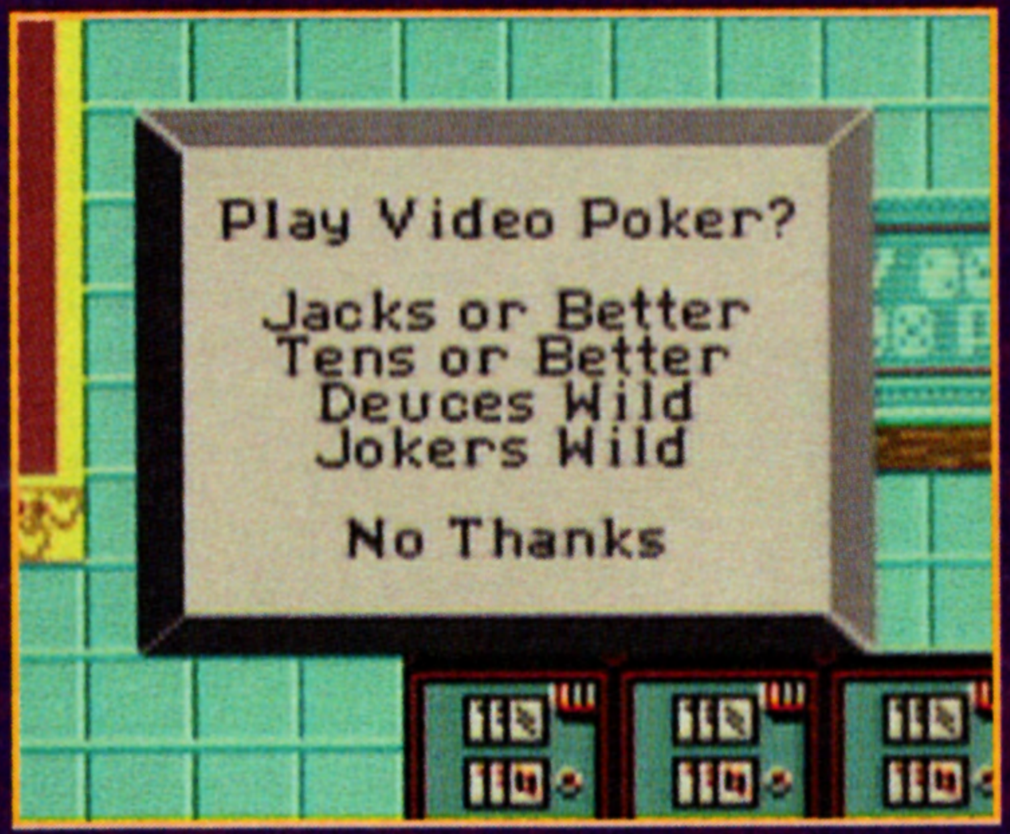
VIDEO POKER



There are four versions of Video Poker, and all of them have their own twists. Deuces Wild is a game in which the 2s become wild cards, thus improving your chances of getting an excellent hand. Jokers Wild does much the same thing, only it uses Jokers instead of 2s. Tens or Better looks for a pair of 10s or better to win any prizes, as does its partner, Jacks or Better, which, obviously, requires pairs of Jacks or better to win.

Each of these games is set up in much the same way. You place your coins in the slot by positioning the cursor over the coin slot - up to five coins per bet - and choose whether to bet the maximum amount or a single coin. When your hand is dealt to you, you choose the cards you want to keep by clicking on the Hold button underneath each card. The cards you do not Hold are discarded, and you are given new cards. If your new hand matches the winning criteria listed on the screen above the cards, you win!

Chip Tip: *If you hold a winning hand with the first deal, the win you'll make lights up on the winner board above the cards. Look carefully!*

SLOT MACHINES

Caesars Palace has an impressive array of slot machines. Though they are different on the surface, each of them is fundamentally the same: you put your money in the machine and hope that it lands on a winning combination.

These are the games you can choose:

Gridiron
Fourth of July
Pirate's Gold
King's Ransom
Classic Progressive
Classic Bars

The main difference between these games is the pay rates they give out. Here are the winning combinations:

When you win, the screen will automatically scroll up showing you the payout details. To view payouts press and hold up on the control pad. To return to the game press "down" on the control pad.

Gridiron

The Gridiron machine has 4 reels and one pay line. You can play 1 to 5 coins. The largest jackpot is only available if you bet 5 coins.

In some ways, Gridiron functions as a normal slot machine, if you get 4 footballs, you are awarded 250 coins per coin you bet. However, if you get any combination of yardage markers totaling between 10 and 24 yards, you are awarded double your coins back. If you get yardage markers totaling between 25 and 49 yards, you get 25 times your bet back. If you get yardage markers totaling between 50 and 99 yards, you get back 50 times your bet. And if you score a touchdown (100 or more yards), you get 100 times your bet back. Watch out for the referee with the penalty flag. He will blow his whistle and subtract 5 yards from your total yardage.

The 4th of July machine has 3 reels and 3 pay lines. You can play 1 to 3 coins. The largest jackpot is only available if you play 3 coins. The firecracker is a wild card and will substitute for any other symbol to give you the largest jackpot.

Pirate's Gold

The Pirate's Gold machine has 4 reels, and one pay line. You can play 1 to 5 coins. You can only win the progressive jackpot with the maximum number of coins bet. Your payout is multiplied by the number of coins you bet.

The Pirate is a wildcard and will substitute for any other symbol to give you the largest payout.
There are also Pirates with black arrows next to them. If a Pirate with a down arrow stops above the pay line, it will "nudge" down to the pay line to help you win. The same is true with a pirate with an up arrow. He will "nudge" up if he stops below the pay line.

King's Ransom

The King's Ransom machine has 3 reels and one pay line. You can play 1 to 3 coins. The largest jackpot is only available if you play 3 coins.

Matching Kings pays the largest jackpot, but unmatched Kings pay well too. No other chess piece needs to match in color to pay.

If two of the three reels stop showing Kings, but the third reel does not match up, then the unmatched reel will spin again, giving you a second chance at the big jackpot.

Classic Progressive

The Classic Progressive machine has 4 reels, and only one pay line, the center. You can play 1 to 3 coins. Playing additional coins gives you a chance to win the progressive payout, and, if you play more coins, your payout is multiplied by the number of coins you bet.

The "Wild" symbol is a wildcard, and will substitute for any other symbol to give you the largest payout.

Classic Bars

The Classic Bars machine has 3 reels, and 3 horizontal pay lines. You can play 1 to 3 coins. The first coin activates the center pay line. The second coin activates the top pay line. The third coin activates the bottom pay line. If there are winning combinations on multiple pay lines, the jackpots are added together. You can only win the largest jackpot on the 3rd pay line.

The "Wild" symbol is a wildcard, and will substitute for any other symbol to give you the largest jackpot.

VIDEO KENO

Video Keno is basically a game of luck. The player chooses a certain amount of numbers out of a pot of 80, then the computer draws 20 numbers. To win you have to match a certain amount of numbers to those drawn by the computer or in some cases don't match with the computers (amounts vary per game).

There are two versions of Video Keno you can play:

Autospot: With Autospot, just insert the amount of money you wish to bet on the game (up to $100). Next press down and move right to highlight and select the bet you wish to place. When you press A on another button of the bets, it will highlight numbers on the Video Keno screen. To choose a different bet, just highlight one and press A again. To see what the payouts will be like after selecting a bet, select the PAYOUTS button and press A. When you have seen them press A to return to the game screen.

When you are happy with your bet, just click on PLAY. The computer will now pick 20 numbers, which will be highlighted in light blue. Any numbers that the computer chooses that match your numbers will be highlighted in red.

The eight bet choices are:

40 Top (T) - With this bet you are selecting the top 40 numbers. To win, you must match at least 11 numbers that are drawn by the computer. The more numbers matched the better the payout.

40 Bottom (B) - This time you are selecting the bottom 40 numbers, the same odds and rules apply as 40 Top.

40 Left (L) - Selects the 40 left hand numbers.

40 Right (R) - Selects the 40 right hand numbers.

40 Top Bottom (TB) - In this game you are betting that at least 13 numbers will be either in the top 40 numbers or in the bottom 40 numbers. No numbers are marked. The payouts are worked out from how many numbers are in the top 40.

40 Left Right (LR) - This time you are betting that at least 13 numbers will be in either the left hand side 40 numbers or the right hand 40 numbers. No numbers are marked. The payouts are worked out from the how many numbers are in the left 40.

32 Edge (E) - Here you are betting on the 32 numbers around the edge of the ticket.

32 Inner (I) - Same odds and numbers matched to win as 32 Edge, except this time you are betting on the middle 32 numbers.

Multiticket: With Multiticket, instead of betting on a set selection of numbers, you get to pick which numbers and how many you wish to bet on. Just insert your money then pick the bet you wish to place. Then make your selection by moving over the number you want and pressing A, pressing A again will de-select it. If you put the wrong numbers in, simply press CLEAR and it will remove all the numbers. If you wish to repeat your last bet, just insert your money and press PLAY.

You have seven choices of bet on this machine:
Straight Ticket (ST) - Here you can choose to back from 1 to 20 numbers.
All Catches (AC) - Here you have to pick between 7 and 10 numbers. You are always guaranteed to win with this bet, but not always as much as you bet.
All or Nothing (AN) - With this bet, you have to pick between 4 and 8 numbers. You only win if all the numbers you selected are matched or none of them are matched.
Bet Against (BA) - This bet works in the opposite way to most other bets. Here you must select between 8 and 15 numbers and hope that none of the numbers are drawn. You only win if none of the numbers you picked are drawn by the computer.
Catch All (CA) - Here you select between 2 and 7 numbers. To win all of the numbers you selected must be matched by the computer.
Last Ball Drawn (LB) - With this bet you must pick between 1 and 6 numbers. As with the other bets you win by matching the numbers up with those drawn by the computer. This game also includes a bonus. If the last number the computer selects matches up with one of your numbers, and all of your numbers are picked, then you double your winnings.
Super Special (SS) - Here you select between 3 and 10 numbers. This bet is probably the best bet, as the pay out odds are better but the jackpot is not as high as other bets.

The SELECT screen:
Quit to Lobby: Exits you from Video Keno.
Game Hints: Provides hints on playing Keno.
Game Options: This screen allows you to do many things, among them are:

Coins added simultaneously: Allows you to add more coins to the credits.

Coin denomination: Changes the denomination of the coin you bet with, as low as $1 and as high as $100.

Return to game: Just like the name says. This option will drop you back in the thick of the action.

Chip Tip: *This game is heavily weighted in the Casino's favor - don't bet too much!*

BIG 6

Big 6 or Wheel of Fortune as it may be better known is a simple casino floor game involving betting on one of 7 bets and then waiting for the bet to come up on a giant wheel.

On the wheel there are 54 slots each equaling one of six different payoff levels. The payoffs are rectangles on the table and are covered in glass.

The payoffs are:

1 to 1 represented by a $1 bill and takes up 23 slots on the wheel.

2 to 1 represented by a $2 bill and takes up 15 slots on the wheel.

5 to 1 represented by a $5 bill and takes up 8 slots on the wheel.

10 to 1 represented by a $10 bill and takes up 4 slots on the wheel.

20 to 1 represented by a $20 bill and takes up 2 slots on the wheel.

40 to 1 represented by the Casino Logo and takes 1 slot on the wheel. (Casino Wager)

40 to 1 represented by a Joker and takes up 1 slot on the wheel.

The player can bet on any of the wagers and then the wheel is spun. The value under the pointer is the winner and all other wagers are collected. There are no special wins.

Spin Wheel: Choosing this option ends your turn and moves on to the next player's turn.

Speed Bet: This option automatically selects the amount of the last bet you made and readies you for the deal.

Change Bet Unit: You can change your bet at the beginning of any hand. Use the control pad to determine how high a wager you'd like to make. To add to the bet unit, move onto the chip and click A, to decrease the bet unit move onto chip and click B. Then move down to OK, and hit A. This is your new bet unit, and you'll be using this bet unit as your basic bet until you change it.

LIMITED WARRANTY

INTERPLAY LIMITED 90-DAY WARRANTY

Interplay warrants to the original purchaser of this Interplay Productions™ product that the cartridge on which the software programs are recorded will be free from defects in material and workmanship for 90 days from the date of purchase. IF the cartridge is found defective within 90 days of original purchase, Interplay agrees to replace, free of charge, any product discovered to be defective within such period upon receipt at its factory service center of the product, postage paid, with proof of the date of purchase. This warranty is limited to the cartridge containing the software program originally provided by Interplay and is not applicable to normal wear and tear. This shall be void if the defect has arisen through abuse, mistreatment, or neglect. Any implied warranties applicable to this product, including warranties of merchantability and fitness for a particular purpose are disclaimed. Interplay disclaims all responsibility for incidental or consequential damages.

Some states do not allow limitations as to how long an implied warranty lasts and/or exclusions or limitations of incidental or consequential damages so the above limitations and/or exclusions or liability may not apply to you. This warranty gives you specific rights, and you may also have other rights which vary from state to state.

LIMITED WARRANTY

If the cartridge should fail after the original 90-day warranty period has expired, you may return the software program to Interplay at the address noted below with a check or money order for $15.00 (U.S. currency), which includes postage and handling, and Interplay will mail a replacement to you. To receive a replacement, you need to enclose the original defective cartridge in protective packaging accompanied by: (1) a $15.00 check or money order, (2) a brief statement describing the defect, and (3) your return address. If you have a problem with your software, you may wish to call us first at (949) 553-6678. If your cartridge is defective and a replacement is necessary, U.P.S. or registered mail is recommended for returns. Please send the defective cartridge only (not the box) with a description of the problem and $5.00 to:
