THE STORY

Hired as a security guard at Ducklair Tower, a building Uncle Scrooge has recently bought, Donald Duck is discovered by Computer One, a super-computer in need of some help. This chance encounter marks a turning point in Donald Duck's life. With the help of Computer One's genius, Donald is equipped with advanced cyber-gadgets, and outfitted in a hero's costume. Donald becomes PK - a real super-hero who needs a lot of real training!

But before PK can start training, Computer One's alarms go off, and PK has his first mission (and some on-the-job training). It seems that the Evronians, a warlike race of aliens, are searching for worlds to conquer and they've chosen their next target: EARTH. Only PK has any chance of stopping the Evronians, and saving Earth!!!

THE CHARACTERS

PK

PK stands for the scientific Latin classification "Platyrhynchos Kineticus." Translated loosely, it means, "Duck of Energy." Put the "P" and the "K" together and you have "PK." As hot-tempered and comical as his alias Donald Duck, this superhero is not excessively brave, but he is courageous. PK is Donald, out to prove that he can really make a difference (with a little help).

ONE

One is an extraordinary super-computer who can create the most amazing gadgets, but because he is a computer, he needs a "hand" to help defend the world from danger. PK becomes this helping "hand."

EVRONIANS

Expansionist and warlike, the Evronians live on Evron, a semi-artificial planet traveling through outer space in search for new worlds to conquer and exploit.

ZOSTER

Zoster is a scientist with a thirst for power. He often chooses solutions which seem to comply with the orders received, but actually suit his own purposes.

ZONDAG

Zondag is the Evronian officer leading the attack on Earth. One hundred percent committed to his duty, Zondag's job is to conquer this lowly planet and crush anyone who stands in his way.

COOLFLAMES

Those who are robbed of their feelings, emotions, and intelligence by the Evronians are turned into "Coolflames" – submissive, obedient slaves not smart enough to perform complex tasks, but they can wield weapons easily enough.

GAME RULES

PK needs to destroy the Evronians and rescue all the Scientists held captive. After PK rescues at least 40 of the Scientists, he will be able to reach the final battlefield...The Evronian Mothership. This will be PK's toughest challenge, and his only chance to save Earth!

GAME INTERFACE

1. Health Bar (Energizer Meter)

This meter tracks PK's energy level. It also shows whether or not PK has enough energy to use the X-Transformer's SuperCharge function. In addition, it shows which type of ammunition the X-Transformer is using and how much ammunition is left.

Note: The X-Transformer automatically uses the most powerful ammunition first, so be careful not to waste any upgrades. The Glowing Green dots located on the lower left of the Energizer Meter keep track of each X-Transformer upgrade PK collects during his adventure.

2. Scientist Icon

This indicates how many Scientists PK has rescued in the current level. Every level has 6 Scientists needing to be rescued (with the exception of the Evronian Mothership and the Boss Battles). Remember, you need to rescue at least 40 Scientists to gain access to the final stage, the Evronian Mothership.

3. Scientist Timer Icon

One of PK's most important objectives is to rescue the Scientists. The real challenge for PK is that the Evronians don't want to let that happen. Therefore, PK only has a limited amount of time to rescue the Scientists, once the Evronians find out that PK is close. This timer pops up and shows PK how much time he has left to save the Scientists before the Evronians warp them back to the Mothership. It also lists the amount of Scientists that are in PK's tracking range. If PK runs out of time, he will need to come back later and try again.

4. Activation Star Icon

This indicates how many Activation Stars PK has collected. The Activation Stars enable PK to activate the Teleport Stations (checkpoints). PK needs 15 Activation Stars to activate each Teleport Station.

5. Remote X-Transformer Icon

One of the X-Transformer's most useful upgrades is REX (the Remote X-Transformer). Once upgraded, PK can send REX into small openings that PK cannot fit into. While in flight, REX can turn, strafe, and even fire lasers at obstacles inside these areas.

6. Mission Report

At the end of each level, Computer One provides PK with a mission report. This mission report updates PK on his progress. It indicates how many Scientists have been rescued, how many still need to be rescued, and how powerful the X-Transformer has become.
