Playing the Game

THE BIKE

Colliding with other bikes and objects during a race can cause your bike to sustain damage and possibly lose performance. However, this is dependent on the handling difficulty level chosen and the severity of the smashes. On the longer races damage can be repaired in the pits.

HANDLING

The game has three handling difficulty levels - novice, intermediate and expert. There are also additional help-aids built into novice and intermediate. Novices receive CPU assistance with all aspects of bike handling. This includes brake assistance, wheelie prevention, weight adjustment (this will stop you falling off your bike) and additional bike stability.

FUEL LOAD

Set your fuel load between 1 and 21 liters. During racing the fuel will reduce, making the superbike lighter and a little faster. To refuel you must enter the pits; this will happen automatically if you stop in the coned area. Note that sidecars cannot pit during a race, so take extra care with the amount of fuel you use on the longer races.

TIRE COMPOUND & PRESSURE

Harder tires are more durable, but are slower than soft or medium tires. Also, hard tires give less grip than soft tires. Likewise, soft pressure increases grip but makes the bike less responsive and slower to accelerate. Soft tires will wear out over one lap of the full TT circuit.
